

# Product Data Sheet

## Digital oil tester

Reference 91600-001-co

## Specifications

### Polar Compounds Display :

- measuring range : 0-40% PC
- resolution : 1% PC

### LED wear indicators :

- 0-15% = normal (green led),
- 16-24% acceptable (yellow led)
- >25% unfit oil (red led)

### Temperature display :

- measuring range : +50 +250 °C
- resolution : 1°C

- Protective cover
- Recalibratable tester

- Size : 30 x 48 x 25 mm
- Charging by USB cable (supplied)
- In individual box

For the frying oil control.

Frying oil deteriorates during prolonged use over 180°C and can cause the appearance of carcinogenic derivatives.

n° 2008-184 European Decree of 26/02/2008 stipulate that : "...vegetable oil must be changed when its Content of Polar Compounds is over 25% . Beyond, the oil is unfit for human consumption."

The percentage of Polar Compounds in oil is immediately visible on the digital display, allowing you to quickly evaluate the thermal oxidation level of the frying oil.
